

AI Inbox for Messenger and Instagram

The main money feature: AI reads customer messages and helps sell, support, and confirm orders.

Why this exists

Social sellers lose sales because replies are slow and staff copy-paste answers. This fixes that.

Primary user	Owner, sales staff, buyer.
Business value	Strongest subscription driver. Saves staff time and increases confirmed orders.
Build priority	P0 - hero feature.

1. Page Goal

- Unify Messenger and Instagram DMs in one inbox.
- AI replies using product, inventory, policy, and customer history.
- Support modes: suggest-only, auto-reply low-risk, human approve for orders.
- Convert chat into draft/confirmed order without retyping.

2. How It Should Look

Left: conversation list with channel, unread, AI status, intent, order risk.
Center: chat thread with buyer messages, AI drafts, staff replies.
Right: customer card, cart/order draft, product suggestions, policy snippets.
Top: filters for unread, needs human, order intent, complaint, VIP.

3. Main Sections

Unified inbox	All customer DMs with search and filters.
AI reply panel	Shows draft, confidence, source facts, approve/edit/send.
Order capture	AI extracts name, phone, address, product, variant, quantity.
Human handoff	Assign to staff, pause AI, internal notes.
Conversation memory	Customer order history and previous issues.

4. User Actions

Approve AI reply	Sends drafted response.	If product data changed, regenerate first.
Auto-reply toggle	Lets AI answer selected intents automatically.	High-risk intents stay approval-only.
Create order	Turns cart/details into order draft.	Missing phone/address blocks confirm.

Pause AI	Stops automated replies for this chat.	Auto resumes only if staff enables.
Assign chat	Routes conversation to staff.	Unassigned urgent chats show alert.

5. Data Fields

- Conversation: channel, page, buyer ID, language, intent, status, assigned staff.
- Message: sender, text, attachments, timestamp, AI confidence, source references.
- Customer: name, phone, address, tags, order count, return history.
- Order draft: items, variant, quantity, delivery area, payment method, notes.

6. AI / Automation Behavior

- AI classifies intent: price, availability, order, complaint, delivery status, return, spam.
- AI asks one question at a time for missing order details.
- AI cites internal source: product, policy, order, delivery status.
- AI escalates low-confidence, angry customer, refund, legal, abuse, or VIP messages.

7. Empty, Error, and Safety States

- Empty state must show one clear next button, not a blank table.
- Every destructive action needs confirm: delete, cancel order, disconnect account, refund mark.
- If third-party API fails, keep local draft and show retry.
- AI must never invent price, stock, delivery charge, delivery date, or policy.

8. Acceptance Checklist

- AI must not confirm unavailable stock.
- AI must not promise exact delivery date unless courier status confirms it.
- Staff can see why AI answered that way.
- Every auto-sent message can be found in audit log.

9. Do Not Build Yet

- No voice-call AI in V1.
- No fully autonomous refund/cancel actions.
- No replying from personal staff Facebook accounts.
