

Comment Automation and Lead Capture

Turns Facebook/Instagram comments like price, pp, details into inbox conversations and orders.

Why this exists

Comment sections create public interest. Fast private replies turn curiosity into sales.

Primary user	Owner, sales staff, buyer.
Business value	Increases lead capture from organic posts and ads.
Build priority	P1 - high attraction feature.

1. Page Goal

- Detect purchase-intent comments and reply/DM automatically.
- Capture leads from post comments, reels, and ad comments.
- Avoid spammy behavior that gets page restricted.
- Let staff review hot leads and negative comments.

2. How It Should Look

Post list: connected posts/reels with comment volume, leads, reply rate.
 Rule builder: keyword, product match, public reply, private DM, delay.
 Comment moderation queue: negative, spam, urgent, unanswered.
 Lead board: interested, DM sent, replied, ordered.

3. Main Sections

Keyword rules	price, pp, inbox, available, size, location, custom Banglish/Roman Urdu words.
Product matching	Links post/reel to product or collection.
Public replies	Short safe reply under comment.
Private DM	Sends product details and order link.
Moderation	Hide spam, flag complaints, assign urgent.

4. User Actions

Create rule	Defines trigger and response.	Warn if rule is too broad.
-------------	-------------------------------	----------------------------

Link product	Connects post to catalog item.	If no product, DM sends shop link.
Send DM	Starts private conversation.	Respect platform limits and consent rules.
Hide comment	Hides spam/abuse from page.	Keep audit trail for owner.
Convert lead	Creates customer lead from commenter.	Merge if same buyer already exists.

5. Data Fields

- Post: platform, post ID, media, caption, linked product, status.
- Rule: keywords, language, delay, public reply, DM template, limit per hour.
- Lead: commenter ID, name, intent, product interest, DM status, order status.
- Moderation: sentiment, hidden flag, staff action, reason.

6. AI / Automation Behavior

- AI detects intent beyond exact keyword, but rules control sending.
- AI writes short natural public replies and product-specific DMs.
- AI flags angry comments for human, not auto-reply.
- AI avoids repeating same reply too many times under one post.

7. Empty, Error, and Safety States

- Empty state must show one clear next button, not a blank table.
- Every destructive action needs confirm: delete, cancel order, disconnect account, refund mark.
- If third-party API fails, keep local draft and show retry.
- AI must never invent price, stock, delivery charge, delivery date, or policy.

8. Acceptance Checklist

- Must respect Meta messaging policies.
- Rate-limit replies to avoid page restriction.
- Seller can preview exactly what buyer receives.
- Negative comments never get cheerful sales DM automatically.

9. Do Not Build Yet

- No mass scraping competitors' comments.
- No fake engagement tools.
- No auto-deleting all negative comments.
